Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Holloway on April 12, 2007.

The application has been amended as follows:

Please delete the redundant use of "the program" in the last two lines of claim 1 so that they read "to the timing trace stream and the program counter trace stream."

Please change line 1 of claim 5 to read "A method for communicating".

Please change line 6 of claim 10 to read "a decoder unit responsive to a reset signal".

Examiner's Comment

Within the claims the examiner is interpreting the "reset signal" to be a deliberate signal, excluding the reset marker from simply being an indication of a reoccurrence of a program's first PC value (which could indicate a program reset, but does not indicate the "signal" associated with the reset). Thus the reset marking indicates a signal, which is beyond the tracing simply having reached a program's first address. This interpretation is a product of the examiner's judgment of the broadest reasonable interpretation of

"signal" in the term "reset signal" and by its use on pages 9, 10, 22 and 23 of the specification.
